Profile Summary:

A dedicated and experienced Mobile App Developer with over 4 years in the field. I'm great at building powerful apps for both iOS and Android using Flutter. My skills go beyond just mobile—I also build the backend using technologies like Node.js, TypeScript, and Go, and manage databases like PostgreSQL. I enjoy using new tech like AI and augmented reality to create apps that are not only useful but also stand out. I'm all about building solid, user-friendly products that solve real problems.

Education

Degree	School/University	Passing Year	Grade
MCA	Atmiya University	2021	8.77 CGPA
BCA	Harivandana College	2019	7.73 CGPA
H.S.C	Genius High School	Mar – 2016	60%

Experience

- **Tecblic Pvt Ltd (Ahmedabad)**

From April – 2022 to Present

Presently working as a Senior Flutter Developer, where I also manage project-level responsibilities.

- **Managed the complete project lifecycle**, from translating client requirements into technical documents to guiding development.

- **Maglinc Creative Solutions Pvt Ltd**

From April – 2021 to March – 2021

Junior Mobile App Developer

Technical Skills

- **Programming Languages:** Java, Dart, JavaScript (Node.js), TypeScript, Go, Python, SQL
- **Mobile Development:** Flutter (iOS & Android), Android Studio
- **Backend & APIs:** Node.js (Express.js), Django, API, Spring Boot, Databricks, Snowflake
- **Database Management:** PostgreSQL, MongoDB, MySQL, Firebase
- **Cloud Platforms:** Amazon Web Services (AWS), Google Cloud Platform (GCP)
- **AI & ML:** AI-driven Fraud Detection, Object Recognition, Machine Learning Models, ARKit, Rasa
- **Version Control:** Git, GitHub
- **Tools & Technologies:** VS Code, Google Maps API, Odoo, ARKit, HTML, CSS

Projects

1. Meta Ninza: eSports Tournament Management Platform

Designed and built a scalable platform for managing esports tournaments with real-time registration, scheduling, and integrated live streaming. Connected external tournament APIs for automated bracket management

Tech Stack: Flutter, Node.js, Express.js, PostgreSQL, AWS, Firebase, OAuth

2. AI-Powered Personal Assistant Bot

Engineered an AI-driven bot that automates task assignments and reminders by interpreting natural language. Built a custom AI engine and a Go-based WhatsApp messaging server for seamless communication.

Tech Stack: WhatsApp MCP, Go, Node.js, TypeScript, PostgreSQL, Open-source NLP Libraries

3. AdaniSportsline: Sports Booking App

Developed a mobile app for booking sports facilities, featuring real-time updates, secure transactions, and a user-friendly interface.

Tech Stack: Flutter (iOS and Android)

4. ElekGo Mobile Application: Electric Scooter Rental

Built a mobile app with secure user authentication (SMS OTP, RTO API) and a dynamic booking system that includes real-time scooter location tracking via the Google Maps API.

Tech Stack: Mobile App (iOS and Android), Google Maps API, Payment Gateway, RTO API

5. ARMR Project: Augmented Reality Advertising Platform

Developed an iOS app that uses ARKit and AI/ML models to create immersive advertising experiences through object detection and dynamic ad rendering.

Tech Stack: Flutter (iOS), ARKit, AI/ML Models, QR Code Scanning

6. Ticket Management System

Created a mobile application with role-based access for managing service requests. Implemented an engineer dashboard with features for real-time notifications, automated reporting, and RCA logging.

Tech Stack: Mobile App (iOS and Android)

7. FameLinks: Fashion and Beauty Talent Platform

Built a full-featured mobile app with user profiles, competition entries, and job listings. Managed user data and content using a Node.js and MongoDB backend.

Tech Stack: Flutter (iOS and Android), Node.js, MongoDB, Firebase

8. LAWINZO APP: Legal Consultation and Case Management System

Developed an application for online legal consultations, featuring case registration, live chat, and a lawyer rating system.

Tech Stack: Flutter (iOS and Android), Node.js, Firebase, Google Maps API

9. TRING APP: Society Security Management System

A mobile app to streamline security and community management for residential societies, including features for online bill payments and maintenance requests.

Tech Stack: Flutter (iOS and Android), Node.js, Firebase, SQL Database

10. Primal GLASS: Task Management and Safety Cockpit

A task management app with a dedicated Safety Cockpit module for logging safety incidents and observations.

Tech Stack: Flutter (iOS and Android), Django (Python), Firebase

11. AI-Ehsan Company: Grocery Store Application

Developed an online grocery application with a product catalog, secure payment integration, and real-time order tracking.

Tech Stack: Flutter (iOS and Android), Odoo (Python), Firebase, Google Maps API

12. Exam Online Application

Built a platform for creating and taking online exams with real-time result processing and an admin dashboard for efficient management.

Tech Stack: Flutter (iOS and Android), Node.js, Firebase, SQL Database

13. Gokulesh Sharan App: Satsang Community Platform

Created a community app for sharing user-generated content, with secure authentication and real-time data handling via Firebase.

Tech Stack: Flutter (iOS and Android), Firebase

14. Magnet App: Accounting and Financial Management Application

Built an accounting application for managing company financial operations, including profit & loss statements, transaction records, and a notification module for timely alerts on accounting tasks. Used MVVM architecture with GetX for reactive state management.

Tech Stack: Flutter, Dart, Node.js, React.js, MySQL, Firebase

15. Warehouse Management System

Built a warehouse management platform enabling efficient inventory tracking and control. Led the UI development and API integrations for the React-based front end, designing the interface with a focus on usability and visual appeal, and integrated APIs to establish smooth communication between the UI and the Django backend.

Tech Stack: React.js, Chakra UI, JavaScript, Python, Django

16. EntitleAI: Data Access Control & Governance Platform

Developed a rule-based governance system that automates data access control to ensure secure, compliant data sharing. The platform translates contract terms between data providers and consumers into enforceable access policies, integrating directly with Snowflake and Databricks to enforce governance rules, monitor query execution and access logs in real time, and reduce manual policy enforcement.

Tech Stack: Snowflake, Databricks, ServiceNow, Tableau

Technical Certification

1. **Certification Name:** Python for Everybody Specialization
MOOC Offered from: University of Michigan
2. **Certification Name:** Single Page Web Applications with Angular
MOOC Offered from: Johns Hopkins University
3. **Certification Name:** Java Programming: Solving Problems with Software
MOOC Offered from: Duke University
4. **Certification Name:** Using Databases with Python

MOOC Offered from: University of Michigan

5. **Certification Name:** Introduction to CSS3

MOOC Offered from: University of Michigan

6. **Certification Name:** Android App Components - Intents, Activities, and Broadcast Receivers

MOOC Offered from: Vanderbilt University

7. **Certification Name:** Build Your First Android App (Project-Centered Course)

MOOC Offered from: CentraleSupélec

8. **Certification Name:** Introduction to Structured Query Language (SQL)

MOOC Offered from: University of Michigan

9. **Certification Name:** Merge, Sort and Filter Data in Python Pandas

MOOC Offered from: Coursera Project Network

Area of Interest

- Machine Learning, Artificial Intelligence, Mobile Application Development

Personal Profile

- Date of Birth: 19 October 2003
- Languages known: English, Hindi, Gujarati
- Hobbies: Music, Reading
